

# Quick Install

The U.are.U Pro for Active Directory Workstation package can be installed and used as a standalone product (without the U.are.U Pro for Active Directory Server). For system deployments that include the Server, refer to the U.are.U Pro for Active Directory Administrator Guide, which provides more information on system configuration and deployment options.

## NOTE

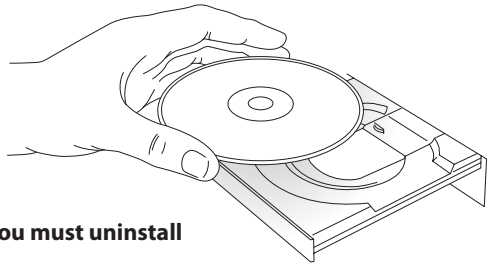

For security reasons, a later installation of the U.are.U Pro for Active Directory Server will require users of the standalone workstation to register their fingers and enter their password replacement data again.

1

### Insert the CD

Insert the U.are.U Pro for Active Directory CD in your CD-ROM drive. When the installation wizard launches, follow the on-screen instructions.

**If other U.are.U products are installed, you must uninstall them before installing this product.**

2

### Plug in the Sensor

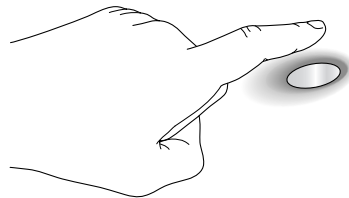

When prompted, plug in the sensor in a USB port. Windows will locate the driver software on the CD and install it automatically.

3

### Touch the Sensor

After restarting your PC, log on to your Windows user account. Then, register a finger to use with U.are.U Pro using the Finger Registration Wizard, which launches automatically.

Congratulations!

You successfully installed U.are.U Pro Workstation for Active Directory. To get started, touch the sensor with your registered finger for quick access to One Touch applications and online help.

# U.are.U<sup>®</sup> Pro for Active Directory

The U.are.U Pro for Active Directory System includes authentication system software and USB fingerprint sensor peripheral(s). The system supports a variety of deployment scenarios. Refer to the U.are.U Pro for Active Directory Administrator Guide for information on system configuration and deployment options. The U.are.U Pro for Active Directory system includes:

## U.are.U Pro for Active Directory Workstation Package

The U.are.U Pro for Active Directory Workstation package includes desktop client software, plus a USB fingerprint sensor (a keyboard integrated sensor is also available).

## U.are.U Pro for Active Directory Server Software

U.are.U Pro for Active Directory Server includes software for Windows 2000 Domain Controllers plus an Active Directory schema extension utility. The optional server software provides more security and manageability needed for larger installations.

---

## Built-in Support

The U.are.U Pro software provides these built-in support options.

### Online Help

Online Help is accessible from the One Touch Menu, as well as various locations in the One Touch Internet and One Touch Crypto applications. It provides on-screen instructions for using U.are.U Pro applications.

### Product Guide

The guide supplies the same information as the online help in both printed and PDF form. The PDF file is located on the CD; the printed guide is located in the product packaging.

## Web Support

Visit the support section of our web site at [www.digitalpersona.com](http://www.digitalpersona.com), where we provide FAQs, online technical support forms and more.

## Protecting Your Privacy

U.are.U helps people and businesses protect sensitive information with ease. You no longer need to rely on remembering passwords or PINs, ("something you know") or carrying smart cards with you ("what you own"), which can easily be retrieved and used by others.

Our fingerprint recognition technology verifies "who you are," with a simple touch of your finger. When you touch the sensor, U.are.U performs a match between the template extracted from that finger image and the templates derived from your registered fingers. Your finger image is never stored and cannot be recreated from the templates. The templates are encrypted and securely stored on your PC.

U.are.U is also built with end-to-end security, with encrypted communications between sensor and recognition software.
